

EXCIPIENTS

PLASTIBASE

- A hydrocarbon gel used for making creams and ointments with especially stable viscosity with temperature

DMSO

- A solvent also used for making creams and ointments which enhances permeation

CYCLODEXTRIN DERIVATIVES

- Especially used for drug delivery and solubilization of poorly soluble APIs.
Used for oral and injectables

SODIUM STEARYL FUMARATE

- Lubricating agents for making tablets

FLORITE

- It's a special porous calcium silicate which can be used to protect APIs from light or to make solid formulations from liquid APIs

MAGNESIUM STEARATE

- Palm oil free
