

Excipients

Plastibase

A hydrocarbon gel used for making creams and ointments with especially stable viscosity with temperature.

DMSO

A solvent also used for making creams and ointments which enhances permeation.

Cyclodextrin derivatives

Especially used for drug delivery and solubilization of poorly soluble APIs. Used for oral and injectables.

Sodium stearyl fumarate

Lubricating agents for making tablets.

Florite

It's a special porous calcium silicate which can be used to protect APIs from light or to make solid formulations from liquid APIs.

Magnesium stearate

Palm oil free.
