## Top Nutraceutical Ingredients

Analyzing the list of plant extracts provided, some products can be identified that stand out, both for their high economic value per kg and for the strong demand in the European food supplement market.

---

### Curcumin (Haldi / Haridra)

**Economic Value:** The version with 95% curcuminoids has a significantly higher value per kg than the standard 10:1 or 12:1 extracts. The higher the concentration of active ingredient, the higher the market price.

**EU Potential:** Turmeric is one of the best-selling ingredients in Europe for its anti-inflammatory and antioxidant properties, supported by a vast scientific literature.

---

### Ashwagandha DPE

**Economic Value:** Withania Somnifera dry extract titrated in Withanolides is a raw material “premium”.

**EU Potential:** It is currently one of the ingredients “stars” in the European market for stress management, anxiety and sleep support (adaptogen segment), with double-digit demand growth.

---

### Bacopa Monnieri

**Economic Value:** Titrated at 20% Bacosides, it requires complex extraction processes that increase its value.

**Potential EU:** Highly sought after in the “nootropics” (memory and cognitive supplements) sector, a rapidly expanding market among professionals and students in Europe.

---

### Grape Seed Extract

**Economic Value:** With a 95% titration in Proanthocyanidins, it is one of the most expensive raw materials per kg due to the very high concentration of polyphenols.

**EU Potential:** Highly appreciated in the beauty (anti-aging) and cardiovascular health markets for its high antioxidant power.
